## **Major Project: CodeSync – A Real-Time Code Collaboration Platform**

We aim to build a comprehensive real-time code collaboration platform designed to enhance the collaborative coding experience, particularly in educational and professional settings. The platform will facilitate seamless interaction between users, enabling them to share a live code editor, collaboratively edit code in real time, and communicate effectively through integrated chat and whiteboard features. With a focus on a user-friendly interface, it will ensure accessibility and smooth navigation for both technical and non-technical users.
